

HAVE A RESCUE PLAN TO PREVENT SUSPENSION TRAUMA

The harness stopped the fall, but hanging too long can be deadly!

Before work begins...

- ✓ Train workers on self and assisted rescues, and provide rescue equipment.

After a fall, initiate the rescue plan...

- ✓ If immediate rescue is not possible, the suspended worker should keep blood circulating by:
 - Using trauma straps or loops, a personal rope ladder, or create a foot loop from the lifeline to shift into a standing position.
 - “Pumping” legs frequently.
- ✓ Call 911. Do not let the worker lie down while waiting for help.

Watch the Clock... if blood is not circulating, it only takes a short time for a worker to:

Become light-headed, nauseous, or unconscious

Suffer suspension trauma and death
