

COVID-19 VACCINE FACT #3

You should get the vaccine even if you've had COVID-19.

Due to the severe health risks associated with COVID-19 and the fact that re-infection is possible, the vaccine is encouraged regardless of whether you already had COVID-19 infection.

At this time, experts do not know how long someone is protected from getting sick again after recovering from COVID-19. The immunity someone gains from having an infection, called natural immunity, varies from person to person. **Some early evidence suggests natural immunity may not last more than 90 days.**
