

CONSTRUCTION PERSONAL PROTECTIVE EQUIPMENT FOR ALL GENDERS AND SIZES

One of the challenges facing women, non-binary workers, and transgender workers in the construction industry is accessing personal protective equipment (PPE) that fits properly. In a [2021 survey](#) of 2,635 tradeswomen and non-binary and transgender tradespeople by the Institute for Women's Policy Research, [only 19.1 of participants](#) said that they were always provided with gloves or safety equipment in sizes that fit them while working.

Equitable PPE fit is a serious occupational safety and health issue. PPE that does not fit properly will not adequately protect against workplace hazards and may even create new hazards. For example, poorly fitted fall protection harnesses may not be effective in the event of a fall and may cause other injuries in regular use, such as pinching or bruising. Oversized or badly-cut protective clothing can fail to protect against hazards and lead to new tripping hazards or become caught in machinery. Similarly, gloves that are too big put a worker at risk of coming in contact with chemicals that can cause dermatitis or other skin diseases. Learn more about PPE fit from NIOSH's [Equitable PPE Protections Workshop](#) or [Science Blog](#).

The number of women workers in construction is increasing, but women remain underrepresented in the industry. Between 2011 and 2022, the percentage of women in the construction workforce increased from 9% to 11% and the percentage of blue-collar women workers in the industry rose from 2% to 4%. However, as of 2021, women accounted for only 3.7% of blue-collar occupations in construction, which is about one-fourth the level of women in blue-collar jobs across all industries. Learn more about gender trends in [CPWR's Data Bulletin on Women in Construction](#).

Providing PPE that fits properly helps ensure that all employees, including women, non-binary workers, and transgender workers, are protected. The following list of examples of commercially available PPE has been compiled to help employers and workers in the trades find PPE that fits a range of anthropometry.
