

What are the side effects of the COVID-19 vaccines?

Most people do not have serious problems and most symptoms go away within 24-72 hours after the vaccine. Any side effects are a sign your immune system is doing exactly what it is supposed to do - building up protection to the COVID-19 virus.

All serious side effects, including life-threatening reactions such as anaphylaxis, are rare, occurring in only 0.0002 – 0.0005 %. Allergic reactions show up quickly, which is why you'll be asked to remain 15-20 minutes after receiving the shot for monitoring. The risk of experiencing a reaction to the vaccine is extremely low when compared to the risk of contracting COVID-19 without the vaccine.
